# [320] Branching and Merging

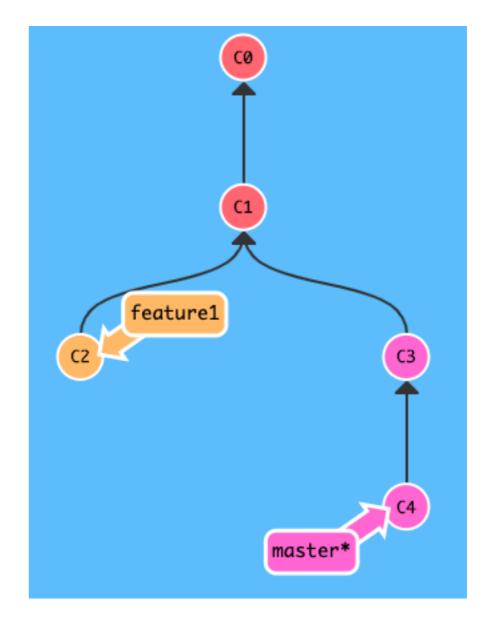

Tyler Caraza-Harter

### Practice Branching

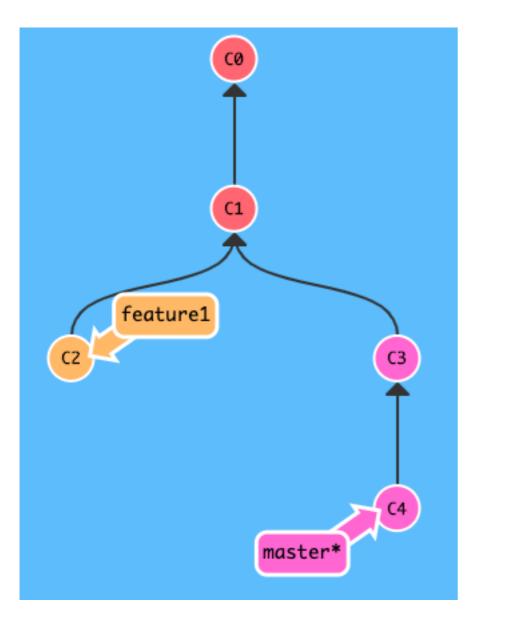

Git equivalent of PythonTutor:

#### https://learngitbranching.js.org/?NODEMO

😑 🔿 🌑 🖀 Learn Git Branching	
<pre>\$ git branch feature1</pre>	☑
<pre>\$ git checkout feature1</pre>	☑
<pre>\$ git commit</pre>	☑
\$ git checkout master	☑
\$ git commit -m 'v1'	☑
<pre>\$ git commit</pre>	

### Merging without Conflicts

#### Switch branch

git merge frombranch

add whatever is there to the current branch

CØ C1 feature1 C3 C4 master\*

tip (or learn vim):
export EDITOR=nano

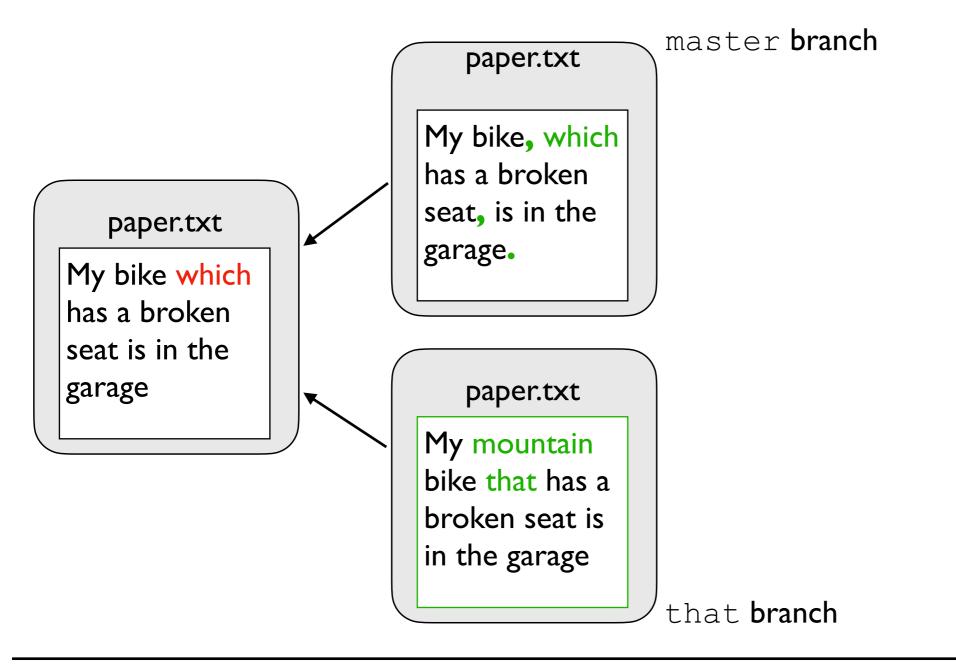

# Merging with Conflicts

What happens when two people try to fix the same issue, in two different (incompatible) ways?

	master <b>branch</b>
paper.txt	
My bike which has a broken seat is in the garage	

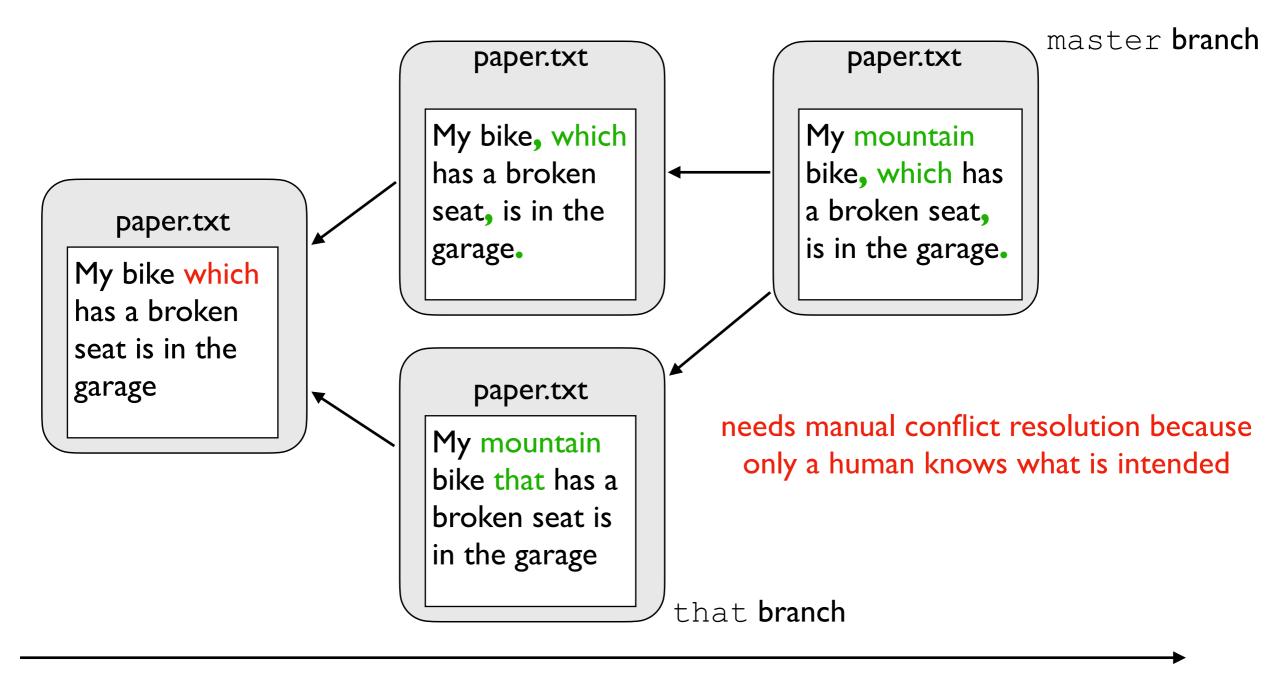

# Merging with Conflicts

What happens when two people try to fix the same issue, in two different (incompatible) ways?

# Merging with Conflicts

What happens when two people try to fix the same issue, in two different (incompatible) ways?

#### Remotes

We will often want to work on our laptops, but also have our repositories on GitHub (or similar)

Create GitHub account, go here: <u>https://github.com/new</u>

#### Summary of Terms

commit: a snapshot of files at a point in time HEAD: a convenient label for the current commit tag: a long-term label associated with a commit branch: a label attached to a commit that re-attaches to new commits merge: to combine changes on another branch into the current branch conflict: differences that cannot automatically be merged

#### Challenges: <a href="https://learngitbranching.js.org/?NODEMO">https://learngitbranching.js.org/?NODEMO</a>
